## VTK Series™ Medium CPT Platforms

The Medium Weight CPT Truck provides greater versatility in sounding tests due to its increased weight of up to 15 tons. The medium CPT truck allows for soundings to greater depths without the use of anchoring systems. This allows for more time to be spent on actual soundings and less time setting up and taking down the anchors. Also, the larger working platform allows for a wider range of body styles.

The chassis can be supplied by Vertek or purchased by the customer. Vertek can build on most medium weight vehicles so the choice of manufacturer is up to the customer.

The medium weight CPT truck is furnished with a CPT system capable of applying 20 tons of down force. It has a gross truck weight of 10 to 15 tons.

Each truck is custom built to meet the customer's individual requirements. Please contact the Vertek sales team to discuss your particular application so we can provide the most appropriate vehicle to fit your needs.
